## Ring

**Date**  
45-450 A D

**Medium**  
Iron

### Description

Circular Roman ring from a horses reins, found in Tokenhouse Yard. London. When originally in use, this ring would have been connected to a second by a short piece of metal. This would have been placed in the horses mouth, while the reins themselves would have been threaded through the rings. If the horse was pulling a chariot, the rings would also have been used to tie the horse to it.

### Dimensions

Object/Work: 6 x 6 x 0.5 mm
