

A detailed photograph of a longhorn beetle (Cerambycidae) resting on a white surface. The beetle has a textured, mottled brown and tan body with dark, wavy lines on its elytra. Its antennae are long, segmented, and slightly curved. The legs are short and thick. The background is plain white, and a small portion of a wooden object is visible in the top left corner.

Insect

1800-2000

Organic

Brown beetle with wings, pincers and long antennae.
